SUMMARY OF RECENT RESEARCH

- 2018- **Landscapes of Dependence**
UIUC Department of Landscape Architecture
Role: Principal Investigator + Studio Instructor

The dramatic increase in opioid use and overdose rates over the past decade in the U.S. has affected diverse ages, races, economic classes, and geographies. Significant recent work by the Centers for Disease Control and Prevention (CDC), the National Institute on Drug Abuse (NIDA), journalists, filmmakers, and others gives us a sense of the scope of the problem: in 2016 alone, opioids were responsible for over 53,000 fatal overdoses across the country. The problem is both rural and urban, and through its entanglement in international pharmaceutical networks, extends beyond the physical borders of the U.S.

"Landscapes of Dependence" interrogates how the built environment, through both design and neglect, has impacted this epidemic. Through spatial, geographic, and network analysis, we examine afflicted places and spaces, searching for ways in which transformations to the designed environment can have positive consequences for affected communities.

The Declaration of Dependence, a living online manifesto, is the primary deliverable for the course. Students produce written and graphic analysis of the issues surrounding this epidemic, routinely posting their work to a collective website. Analyses range from infographics and GIS mapping to animations, film, and physical and digital model-building. The online platform supports 2D, 3D, and 4D work.

- 2016- **Cultivating Power: Colonialism as Urbanism in a New Global Context**
UIUC Department of Landscape Architecture
Role: Principal Investigator
- European colonialism was a global-scale reordering of world systems, including geopolitics, agriculture, labor, mechanical production, urban growth, commodities trade, and capitalism, within which we are still embedded today. Significant bodies of scholarly and artistic discourse trace the effects of these shifts on colonized territories, but the reverse—the effects of colonialism on the spatial and economic development of colonizers’ urban “metropolises”—has gone comparatively under-examined. This project focuses on the British Empire, which had the largest colonial footprint in the 20th century, examining its resource extraction patterns in South Asia and the parallel urban transformations that occurred in places like London, Manchester, and Liverpool in the 19th and 20th centuries. Through this work, colonial processes and exploitations, often missing from larger narratives on modern globalization, are reintroduced as drivers of contemporary urbanism.
- 2011- **City of Edges**
Master in Design Studies Thesis, Graduate School of Design; Faculty Advisor K. Michael Hays
- City of Edges* establishes the wall as a structuring paradigm in contemporary Delhi. Walled cities have a long and tumultuous history in India’s capital, but this thesis argues that they are not merely historical relics. Rather, Delhi has, both consciously and otherwise, emerged as a unique urban case study where walls, thresholds, and edges dominate the modern urban experience. Through mapping, drawing, and experimental writing forms, this project challenges the linearity of historical writing on India and suggests that urban space, with its ability to represent different eras simultaneously, is a form of history that can be “read” and “written.”
- Shifting Grounds: Urban Morphologies in the Yamuna Riverbed**
Graduate School of Design Penny White Travel Award
Role: Principal Investigator
- Shifting Grounds* investigates the fertile strip of land between Old Delhi (Shahjahanabad) and the current location of the Yamuna River, a river that is constantly shifting eastward across the Indo-Gangetic Plain. The project maps the strip through a grid system, identifying and analyzing the relationships between water, land, large-scale transportation infrastructure, and agriculture.
- 2011-12 **Kumbh Mela: Mapping the Ephemeral Mega-City**
Graduate School of Design Urban India Initiative; Faculty Advisor Rahul Mehrotra
Role: Lead Research Associate
- The Kumbh Mela, a Hindu religious festival that occurs every twelve years at the confluence of the Ganga and Yamuna Rivers in the city of Allahabad, is a prototype for a concept we call the “pop-up mega-city.” An in-depth study of this typological model yields potential deployment in crisis situations, like in refugee camps and sites of natural disasters.
- The Urban India Atlas**
Graduate School of Design Urban India Initiative; Faculty Advisor Rahul Mehrotra
Role: Research Assistant
- This project is a long-term critical assessment of emergent patterns of urban growth in India today. The investigation applies a range of spatial analysis techniques to better understand the logic behind urban, regional, and national development, and arrive at conclusions regarding future patterns of growth.
